FIRE INVESTIGATION

By Nigel Maxwell

Weekend fire destroys cattle barn

May 27, 2024 | 1:45 PM

Less than two weeks away from the annual 4H Show and Sale in Prince Albert, the main cattle barn on the exhibition grounds has been destroyed by fire.

On Saturday, at approximately 6:30 p.m., the city's fire department was called to the scene. Upon arrival, heavy smoke could be seen coming from the roof and eves of the large barn.

The first arriving crew gained entry through a man door to extinguish the interior fire. The crew then had to cease the interior attack due to roof trusses collapsing. Exterior cladding was removed to access and extinguish the remaining fire.

The structure sustained significant structural damage. The cause is currently under investigation and there were no injuries to report.

Greg Dionne, president of the Prince Albert Exhibition Association, informed *paNOW* the structure is insured and he's been told by investigators that the fire was started outside the building.

With respect to the upcoming 4H show and sale on June 9 and 10, Dionne described the loss of the barn as devastating but added alternative arrangements are being made.

Christine MacGillivray, General Leader of the Weldon 4H Club, acknowledged the fire will definitely affect the space for animals and tack. She explained how normally they have two clubs in each barn, so now with the fire, all four clubs will be in barn one.

After investigation, it was concluded that one of the hay bales in the barn combusted.

~

What this means:

As a wet or green spot of hay in a mow or a large bale heats, moisture is driven into the surrounding dry hay. The area where the wet and dry hay touch, has the heat, dampness and insulation necessary to start a fire. When the internal temperature of hay rises above 130 degrees Fahrenheit, it provokes a chemical reaction producing flammable gases that can ignite. Most hay fires occur within 6-weeks of baling.

~

There were hay bales in the barn, as the 4H Show and Sale was coming up, and the barn was getting prepared to hold many animals.

Horse stable fire at P.A. Exhibition Grounds under investigation

Feb 19, 2023 | 4:36 PM

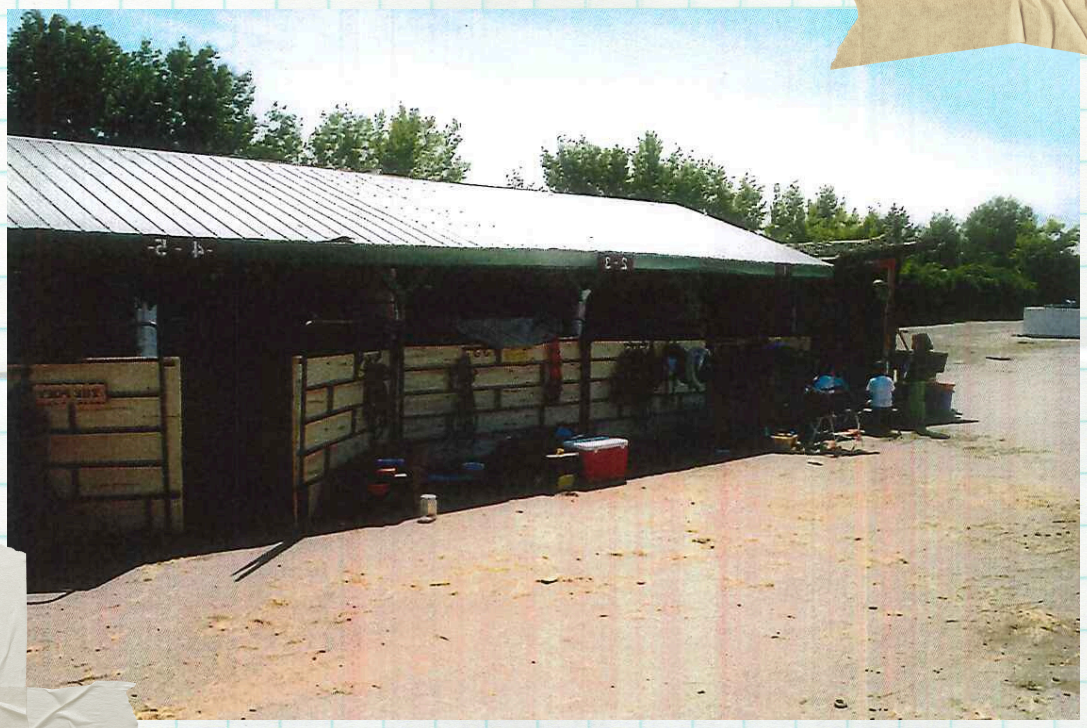

A fire at a horse stable at the Prince Albert Exhibition Grounds is being considered suspicious by fire crews.

At around 12:30 Sunday afternoon, members with the Prince Albert police service (PAPS) and fire department were dispatched to a blaze in the southwest corner of the grounds. That's where they found the east side of the stables fully engulfed in flames.

The blaze was quickly brought under control by fire crews and no other buildings were damaged.

Fire investigators will be on scene Monday morning to determine a cause. PAPS also confirmed the fire is under investigation.
